

Join Us On The Search For New Treatment For Lung Cancer

You May Be Eligible To Join Our Clinical Study, Researching A Biosimilar Study Treatment For Metastatic or Recurrent Non-Squamous Non-Small Cell Lung Cancer (NSCLC).

What Is This Study About?

- **Phase III** global clinical study
- evaluating the effectiveness and safety of a **biosimilar study medication HD204** against the **approved reference bevacizumab Avastin®** given with chemotherapy for treating NSCLC
- approximately **592 participants** across an estimated **20 countries** globally

Who Is Eligible To Join?

AGE

DIAGNOSIS

What Is A Biosimilar?

- Essentially a similar version of an original biological medication (obtained via reverse-engineering)
- A patient can expect the same level of safety and effectiveness as taking the original biological treatment medication
- The study medication HD204 is a biosimilar of the reference bevacizumab Avastin®

Key Potential Benefits From Joining:

✓ NO PLACEBOS

You will receive only either the study biosimilar HD204 or reference medication Avastin®

✓ PROFESSIONAL MEDICAL CARE

Same professional level of medical care for all participants

✓ NO COST INVOLVED

All study medication, tests and medical care related to study is provided

✓ CONTINUAL TREATMENT

You have the option to continue treatment with HD204, if you are still benefiting from the therapies at end of study

What Is My Involvement In The Study?

Study centre visits every 3 weeks for up to 17 times

Receive chemotherapy up to 6 times within 1st 6 visits

Tumor assessment up to 6 times via CT or MRI scans

Physical exams, blood tests and other requirements as discussed with study doctor

If you have any concerns/questions on the study benefits, risks and responsibilities, feel free to discuss with us before or during the study.
